ECO-MODE

ECO-MODE Our brand-new ECO-Mode allows the customer to set up to 2 Eco-mode times.

Eco-mode puts the tank into standby mode when it will not be used over a prolonged period. For instance, during the night or when people are at work during the day. It can be programmed to initiate standby mode at a specific time and to return to full power mode at your chosen time.

A fantastic power and money saving feature.

The Eco-mode can be overridden at any time by simply tapping the ECO button and to activate again simply touch Eco button once.

3 IN 1 TAP RANGE D-SPOUT

The 3in1 is available in C-Spout, D-Spout and Traditional in a variety of finishes. Includes tank, filter and descale kit.

Available in:

- Chrome
- Brushed Nickel
- Brushed Gold
- Matt Black

BOILING

A 3 second delay for child safety is activated with the touch of the control button. The red light illuminates when it is about to dispense 98°C boiling water. For safety, touch must be maintained on the control button whilst the boiling water is being dispensed. When touch is removed the flow will stop.

FILTERED

The superior filter system (WRAS and NSF approved) provides you with best tasting, safe water for your enjoyment. With a simple touch of the control button, the blue LED illuminates and dispenses filtered water

REGULAR HOT

Regular hot mains water is supplied unfiltered through the tap's ceramic mixing valve. The ceramic valves allows smooth adjustment to the desired temperature with durable long-life performance.

REGULAR COLD

Regular cold mains water is supplied unfiltered the taps ceramic valve.

*[Maximum condition] Pressure: 4.0kgf/cm², Flow: 3.8l/min, Temp: 45°C(113°F)

DESCALE KITS

The filter system provided with our hot water systems will help to prevent scaling of the boiler and give better tasting water. The filter will reduce the need to descale the water system but does not eliminate it.

We are one of the only companies to include a full descaling kit with each system. This encourages consumers to descale their tanks to ensure maximum efficiency and product life of their systems. This will also save customers money over time as scaled systems use much more power to run.

Comprehensive and easy to follow instructions are included. Any help or advice needed is readily available from our customer service team.

Included with each system :
